Abstract

One subgenus and one genus of Pseudothelphusidae described by Gilberto Rodríguez and Alfred E. Smalley from Mexico have been erroneously referred to for over 40 years as variously described in 1968 and 1969. The review of the original publication indicates that these taxa were published in a journal dated 1969 that became available for distribution only in 1972. Smalley (1970), who believed that the original manuscript had been previously published, referred to some of these new taxa (i.e., *Epithelphusa*, *E. mixtepeñsis*, *Tehuana* and *T. veracruzana*) and provided sufficient information to make these names available in 1970, thus becoming the correct authorship for these four taxa. Therefore they must be referred to as "Rodríguez & Smalley in Smalley 1970". A list of all affected taxa with the correct publication date and authorship is given. A list of publications in which the taxa authored by Rodríguez and Smalley were erroneously referred to as published in 1969 is also provided.

Key words: Pseudothelphusidae, freshwater crabs, Mexico, Middle America, authorship, date of publication

Introduction

The late Gilberto Rodríguez was during his career a major contributor to our knowledge of neotropical freshwater crabs. We will refer herein to many of Rodríguez' publications and to contributions published by his colleagues in which they cited his work. The name "Rodríguez", which in Spanish takes an accent on the "i", was unfortunately often misspelled, i.e., without this accent, particularly in contributions written in English. We have respected the spelling of the name "Rodríguez" (i.e., with or without the accent) and for this matter the names of other authors, so that these authors are herein quoted under the exact name and spelling as they appeared in the original works (see Ng 1994; Dubois 2008).

A major contribution to the study of neotropical freshwater crabs is the monograph including 32 genera and 131 species by Rodríguez (Rodriguez 1982), a publication that has since been used as a standard reference on these crabs. Among the numerous contributions cited by Rodríguez (Rodriguez 1982; see also Rodriguez 1980), one authored by Gilberto Rodríguez and Alfred E. Smalley was particularly important as it described ten new species, one new subgenus [*Pseudothelphusa (Tehuana)*] and one new genus (*Epithelphusa*). This contribution was published in a Mexican journal, the *Anales del Instituto de Biología, Serie Ciencias del Mar y Limnología, UNAM*, reported by Rodriguez (1982) as "Rodriguez & Smalley (1969)".

An examination of the original volume (vol. 40, no. 1) in which this contribution was published has shown that it was actually issued on the 25th of January 1972 (25 de enero de 1972) as indicated on the printer page, at the end of the volume, although the cover page indicates 1969 as the publication date. According to Article 21 of the *International Code of Zoological Nomenclature* (Anonymous 1999), it would therefore appear that the use of the

Quite important is the fact that all description dates for taxa included in Table 1 and found in databases on line such as WoRMS (World Register of Marine Species) are also erroneous and must be corrected. Some non-taxonomical papers quoting the incorrect date of the paper of Rodríguez and Smalley, such as that of Gelder (1999) dealing with ectosymbionts on freshwater crustaceans and giving the date of 1970, are not listed here. It is quite possible that some of the contributions in which "Rodríguez & Smalley" taxa are quoted have been overlooked during our search. We leave to the specialists the task of completing our quest.

Acknowledgments

We thank J.L. Villalobos (Instituto de Biología, UNAM, Mexico), C. Magalhães (Instituto Nacional de Pesquisas da Amazônia, Manaus, Brazil) and M. Türkay (Senckenberg Forschungsinstitut und Naturmuseum, Frankfurt a.M., Germany) for providing a copy of their contributions. We also acknowledge the assistance of Paul F. Clark (The Natural History Museum, London) who very kindly assisted in checking the copies of the papers of interest at this institution. Detailed review and suggestions of C. Magalhães, M.E.Y. Low (Raffles Museum of Biodiversity Research, National University of Singapore), and P. Castro (California State Polytechnic University, Pomona, U.S.A.) helped improve the original manuscript.
