Abstract

The genus *Mayazomus* currently contains two species from southeastern Mexico. It was originally characterized by a strongly elongated pedipalp trochanter, united in its entire width to the femur; the patella strongly curved; the tibia with a large mesal apophysis opposable to tarsus; the spermathecae with two pairs of thin lobes subequal in length; and the presence of four or more setae on tergite II. In the present contribution, the species of the genus *Mayazomus* are revised and new diagnostic characters for the genus are proposed, including the correction that the female flagellum bears three rather than two annuli. The two known species are redescribed based on examination of the holotypes, plus newly acquired material representing both sexes (female previously unknown for one). Five new species from the Mexican state of Chiapas are described, based on adult males and females: *Mayazomus tzotzil* new species, *Mayazomus aluxe* new species, *Mayazomus kaamuul* new species, *Mayazomus yaax* new species, and *Mayazomus loobil* new species. Dimorphism in male pedipalps is reported for the first time for the genus. A dichotomous key is provided for identification of the seven species in the genus; and a distribution map is included.

Key words: Schizomids, Taxonomy, Diversity, Polymorphism

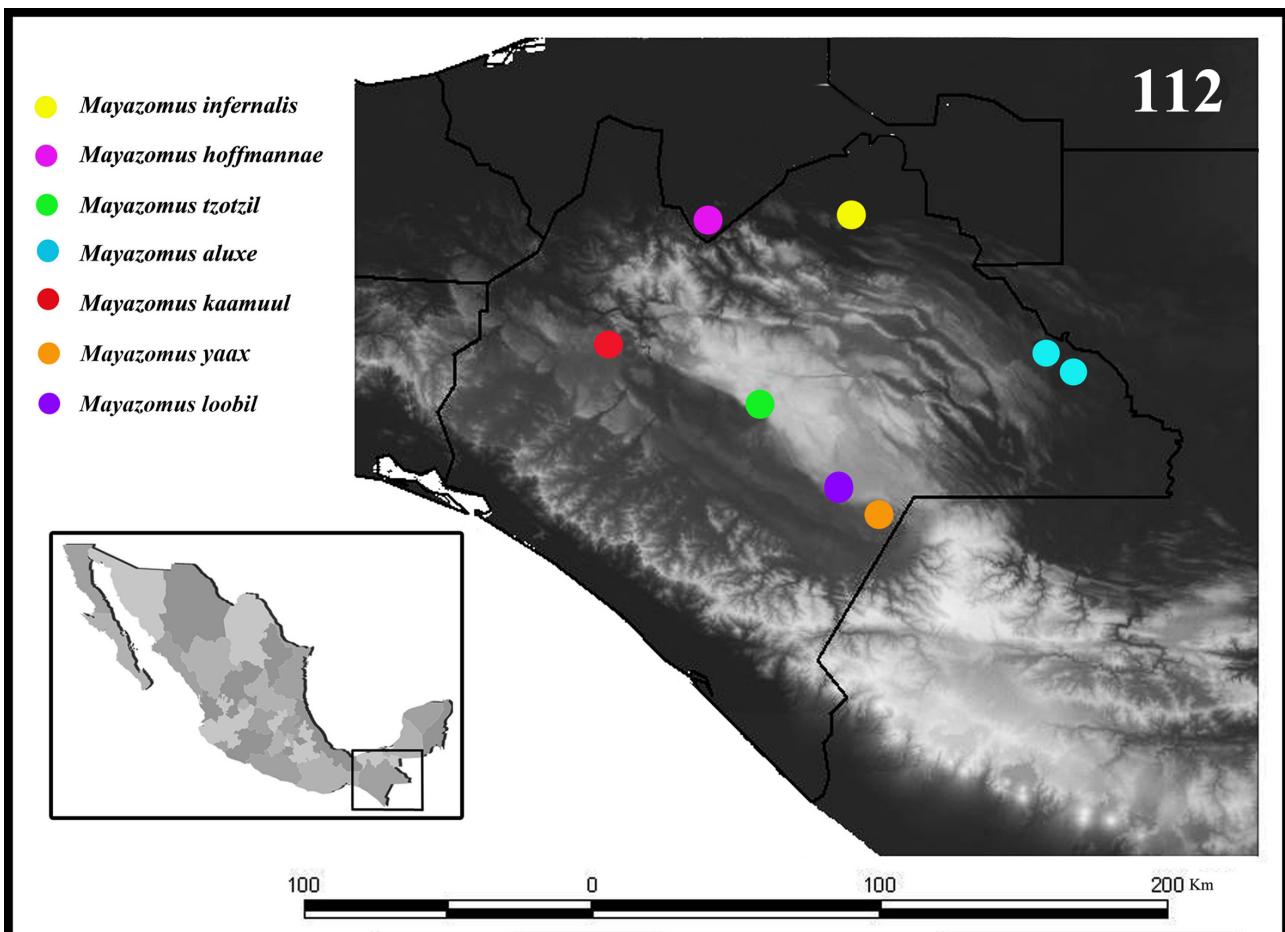

FIGURE 112. Distribution map of the known species of the genus *Mayazomus*, showing the type localities of the five new species: *M. tzotzil*, *M. aluxe*, *M. kaamul*, *M. yaax* and *M. loobil*

Acknowledgments

We thank Berenit Mendoza Garfias (IBUNAM) for her help and assistance with the SEM photographs. We thank F. Bertoni, G. Contreras, J. Cruz, J. Mendoza, I. Mondragón, H. Montaño, G. Montiel, R. Paredes, N. Pérez, S. Rubio, C. Santibañez and K. Zárate for their help collecting the specimens. To Lorenzo Prendini and Louis Sorkin for their help and assistance during the first author's research visit at the American Museum of Natural History. The first author thanks the Consejo Nacional de Ciencia y Tecnología (CONACYT) and the Posgrado en Ciencias Biológicas, Instituto de Biología, UNAM (IBUNAM) for financial support; and to the grant program PAEP, UNAM for the financial support during the stay in New York City at the American Museum of Natural History. Carlos Santibanez-López kindly revised an early draft of this manuscript, and Jesús Cruz-López helped during the final preparation of figures and plates. Specimens were collected under the Scientific Collector Permit FAUT-175 granted by SEMARNAT, Mexico, to Oscar F. Francke.
