

RESEARCH ARTICLE

A revised checklist species of the Curculionoidea (Coleoptera, excluding Scolytinae) of Rostov Oblast and Kalmykia, the southern part of European Russia

Yuri G. Arzanov¹

¹*Institute of Arid Zones of RAS, Chekhov str., 41, Rostov-on-Don, 344006, Russia. E-mail: arz99@mail.ru*

Abstract: This work provides a list of 703 species of weevils (Coleoptera: Curculionoidea, excluding Scolytinae) recorded in two adjacent administrative regions in the southern part of European Russia: Rostov Oblast and the Republic of Kalmykia. The species diversity of the ten recorded families is as follows: Nemonychidae (1), Anthribidae (10), Rhynchitidae (12), Attelabidae (2), Apionidae (70), Nanophyidae (12), Brachyceridae (2), Dryophthoridae (4), Eirrhinidae (13), Curculionidae (577, excluding Scolytinae). In total, 151 species are added to the faunal list of the southern European Russia.

Key words: Coleoptera, Curculionoidea, southern European Russia, Rostov Oblast, Kalmykia.

Introduction

The recently published two weevil volumes of the Catalogue of Palaearctic Coleoptera (Löbl & Smetana 2011, 2013) significantly updated numerous regional faunas. However, unlike the other treated countries, both Russia and China were regionally subdivided into smaller units. The subregions referring to the southern part of European Russia (coded as ST in Löbl & Smetana 2011, 2013) is rather heterogeneous in its physical and climatic characteristics, with the landscapes varying from deserts and steppes to broadleaf forests and alpine meadows.

This paper focuses on the faunal list of weevils (Curculionoidea, excluding Scolytinae) of two adjacent administrative regions of southern Russia: Rostov Oblast and the Republic of Kalmykia (=Kalmykia). They both belong to the same unit of “Russia: South European territory” as adopted in the aforementioned catalogue (Löbl & Smetana 2011,

2013) (Fig. 1). The region is predominantly flat, lacking significant mountains, and is heavily modified for agriculture. The original vegetation was predominantly of steppe formation (=grasslands) on the west (Rostov Oblast) and semi deserts or deserts in the east (Kalmykia), with broadleaf forests almost exclusively restricted to river valleys. Relatively few previous attempts to document weevil diversity of the region focussed mainly on the pest species, and all are now outdated (Kiseritzky 1912; Lukjanovitsh 1926; Dobrovolsky 1951; Arzanov 1988, 1990).

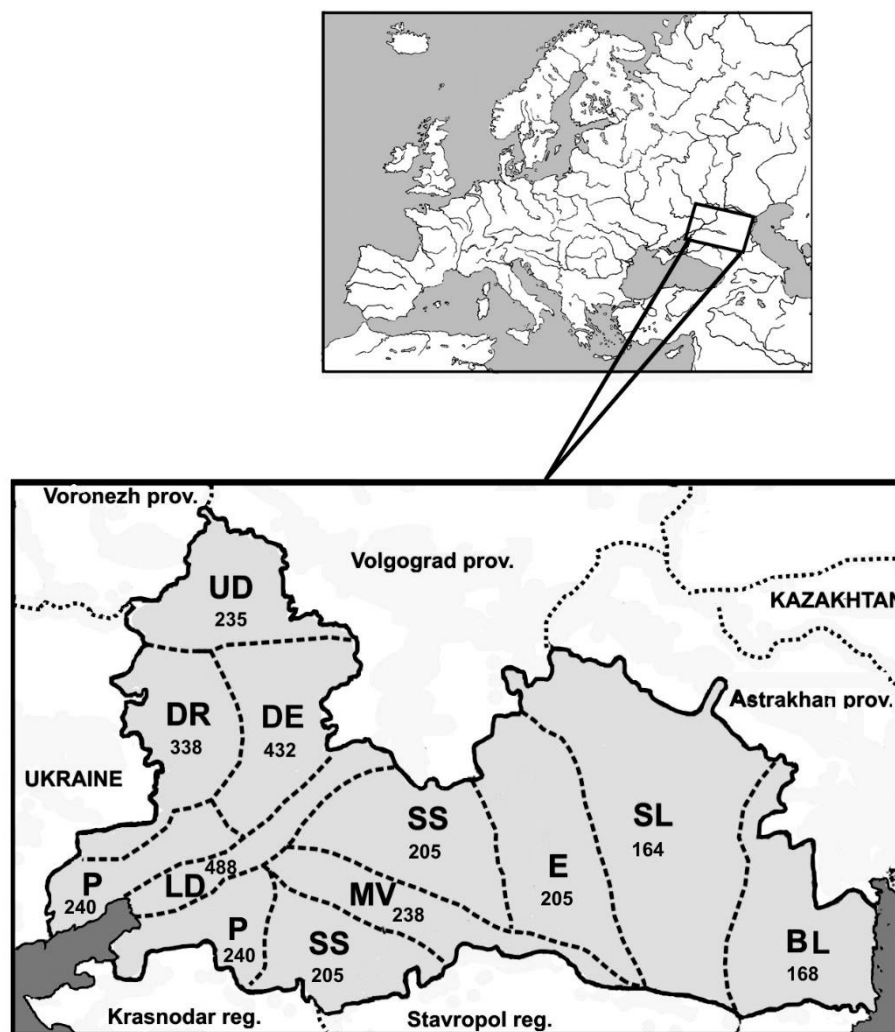

Figure 1. Map of Rostov Oblast and Kalmykia showing borders of ten internal regions. Subregion abbreviations are: Upper Don (UD), Donets Ridge (DR), Donets Elevation (DE), Lower Don (LD), Priazovia (P), Manych River Valley (MV), Salsk Steppe (SS) Ergeni Elevation (E), Sarpinsk Lowland (SL) and Black Lands (BL). Total number of species of Curculionoidea (excepting Scolytinae) is given inside each subregion.

Material and methods

The present list is predominantly based on specimens that have been annually collected by the authors in both Rostov Oblast and Kalmykia since 1975. Identifications were made by comparing specimens with the vouchers deposited in the collection of the

Zoological Institute in St. Petersburg, Russia. Classification and taxonomic arrangement follow that of Alonso-Zarazaga & Lyal (1999, 2002), which was partly adopted in the weevil volumes of the Catalogue of Palaearctic Coleoptera (Löbl & Smetana 2011, 2013), plus a few subsequent modifications (Korotyeav & Fridman 2011; Lyal 2014; Osella & Bello 2010). Except for the families and subfamilies, all taxa of the same rank are arranged alphabetically.

For the purposes of the present checklist, the entire territory of Rostov Oblast and Kalmykia is further subdivided in ten non-administrative regions to represent discrete biological and climatic entities (Fig. 1): Upper Don (UD), Donets Ridge (DR), Donets Elevation (DE), Lower Don (LD), Priazovia (P), Manych River Valley (MV), Salsk Steppe (SS) Ergeni Elevation (E), Sarpinsk Lowland (SL) and Black Lands (BL).

Results

The following 151 species are added to the faunal list of the southern European Russia region, as delimited in the recent "Catalogue of Palaearctic Coleoptera" (Löbl & Smetana 2011, 2013): **APIONIDAE: Apionini:** *Apion cruentatum* Walton, 1844, *A. haematodes* Kirby, 1808; **Aplemonini:** *Perapion marchicum* (Herbst, 1797), *P. myochroum* (Schilsky, 1902); **Exapiini:** *Exapion corniculatum* (Germar, 1817), *E. difficile* (Herbst, 1797); **Oxystomatini:** *Cyanapion afer* (Gyllenhal, 1833), *Betulapion simile simile* (Kirby, 1811); **Piezotrachelini:** *Protapion ruficrus* (Germar, 1817). **NANOPHYIDAE:** *Dieckmanniellus gracilis* (Redtenbacher, 1847), *D. nitidulus* (Gyllenhal, 1838), *Nanomimus hemisphaericus* (Olivier, 1807), *Nanophyes brevis brevis* Boheman, 1845. **BRACHYCERIDAE:** *Brachycerus sinuatus* Olivier, 1807. **ERIRHINIDAE:** **Arthrostenini:** *Arthrostenus fullo* Boheman, 1836; **Eirrhiniini:** *Bagoopsis volgensis* Faust, 1881, *B. globicollis* (Fairmaire, 1863), *Icaris sparganii* (Gyllenhal, 1835), *Notaris acridulus* (Linnaeus, 1758), *N. scirpi* (Fabricius, 1792), *Picia sinuatocollis* (Faust, 1885), *Procas picipes steveni* (Krynicky, 1832), *Thryogenes festucae* (Herbst, 1795), *Th. nereis* (Paykull, 1800), *Tournotaris bimaculata* (Fabricius, 1787). **Tanysphyrini:** *Tanysphyrus lemnae* (Paykull, 1792). **CURCULIONIDAE: Curculioninae Anthonomini:** *Anthonomus pinivorax* Silfverberg, 1977, *A. bituberculatus* C. G. Thomson, 1868, *A. pedicularius* (Linnaeus, 1758), *Bradybatus kellneri* Bach, 1854, *B. seriesetosus* Petri, 1912; **Cionini:** *Cionus hortulanus* (Geoffroy, 1785), *C. olivieri* Rosenschoeld, 1838, *C. scrophulariae* (Linnaeus, 1758), *C. tuberculosus* (Scopoli, 1763); **Curculionini** Latreille, 1802, *Curculio elephas* (Gyllenhal, 1835); **Ellescini:** *Dorytomus dejeani* Faust, 1883, *D. filirostris* Gyllenhal, 1835, *D. ictor* (Herbst, 1795), *D. longimanus* (Forster, 1771), *D. melanophthalmus* (Paykull, 1792), *D. nebulosus* Gyllenhal, 1835, *D. tremulae* (Fabricius, 1787), *D. suratus* (Gyllenhal, 1835), *Ellescus infirmus* (Herbst, 1795); **Itini:** *Ita kirschii* Tournier, 1878; **Mecinini:** *Cleopomiarus distinctus* (Boheman, 1845), *Gymnetron melanarium* (Germar, 1821), *G. niloticum* Kirsch, 1881, *G. rotundicolle* Gyllenhal, 1838, *G. veronicae* (Germar, 1821), *G. villosulum* Gyllenhal, 1838, *G. vittipenne* Marseul, 1876, *G. terminassiana* Smreczyński, 1975, *Mecinus collaris* Germar, 1821, *M. heydenii* Wencker, 1866, *M. labilis* (Herbst, 1795), *M. plantaginis* (Eppelsheim, 1875), *Miarus ajugae* (Herbst, 1795), *Rhinusa antirrhini* (Paykull, 1800), *Rh. asellus* (Gravenhorst, 1807), *Rh. florum* (Rübsaamen, 1895), *Rh. linariae* (Panzer, 1795), *Rh. melas* Boheman, 1838, *Rh. neta* (Germar, 1821), *Rh. pilosa* (Gyllenhal, 1838); **Rhamphini:** *Orchestes alni* (Linnaeus, 1758), *O. mutabilis* Boheman, 1843, *Pseudorchestes circumvistulanus* (Bialooki, 1997), *P. horioni* (Dieckmann, 1958); **Smicronychini:** *Smicronyx coecus* (Reich, 1797), *S. jungermanniae* (Reich, 1797), *S. nebulosus* Tournier, 1874, *S. reichii* (Gyllenhal, 1835), *S. smreczynskii* (F. Solari, 1952); **Storeini:** *Pachytychius transcaucasicus* Pic, 1913; **Tychiini:** *Lignyodes bischoffi* (Blatchley,

1916); *Sibinia bipunctata* Kirsch, 1871, *S. phalerata* Gyllenhal, 1835, *S. primita* Herbst, 1795, *S. variata* Gyllenhal, 1835, *Tychius argentatus* Chevrolat, 1859, *T. bedeli* Faust, 1885, *T. flavus* Becker, 1864, *T. hauseri* Faust, 1889, *T. pusillus* Germar, 1842, *T. rufirostris* Schoenherr, 1832, *T. squamulatus* Gyllenhal, 1835, *T. sulphureus* Faust, 1881, *T. trivialis* Boheman, 1843, *T. uralensis* Pic, 1902; **Bagoinae**: *Bagous argillaceus* Gyllenhal, 1836, *B. biimpressus* Fåhraeus, 1845, *B. diglyptus* Boheman, 1845, *B. frivaldszkyi* Tournier, 1874, *B. glabrirostris* (Herbst, 1795), *B. limosus* (Gyllenhal, 1827), *B. lutosus* (Gyllenhal, 1813), *B. lutulentus* (Gyllenhal, 1813), *B. petro* (Herbst, 1795), *B. puncticollis* Boheman, 1845, *B. subcarinatus* Gyllenhal, 1836, *B. tubulus* Caldara & O'Brien, 1994; **Baridinae**: *Elasmobaris alboguttata* (H. Brisout de Barneville, 1870), *E. signifera* (Faust, 1881), *Melanobaris atramentaria* (Boheman, 1836), *M. nigratarsis* (Boheman, 1844); **Ceutorhynchinae**: **Ceutorhynchini**: *Ceutorhynchus canaliculatus* C. N. F. Brisout de Barneville, 1869, *C. coarctatus* Gyllenhal, 1837, *C. constrictus* (Marsham, 1802), *C. difficilis* Schultze, 1898, *C. sulcatus* C. N. F. Brisout de Barneville, 1869, *Datonychus angulosus* (Boheman, 1845), *D. arquata* (Herbst, 1795), *Glocianus lethierryi* (C. N. F. Brisout de Barneville, 1866), *G. moelleri* (C. G. Thomson, 1868), *G. polystriatus* (Schultze, 1898), *Mogulones abbreviatulus* (Fabricius, 1792), *M. albosignatus* (Gyllenhal, 1837), *M. dimidiatus* (J. Frivaldszky, 1865), *M. raphani* (Fabricius, 1792), *M. venedicus* (Weise, 1879), *Phrydiuchus topiarius* (Germar, 1824), *Platygasteronyx solskyi* (Faust, 1885), *Poophagus hopffgarteni* Tournier, 1873, *Prisistus caucasicus caucasicus* (Kirsch, 1879), *P. obsoletus* (Germar, 1824), *Thamiocolus sahlbergi* (C. R. Sahlberg, 1845), *Rhinoncus castor* (Fabricius, 1792); **Hypurini**: *Aphytobius sphaerion* Boheman, 1845; **Cyclominae**: *Gronops inaequalis* Boheman, 1842, *Entomoderus phrygius* (K. Daniel & J. Daniel, 1903); **Entiminae**: **Brachyderini**: *Brachyderes incanus* (Linnaeus, 1758); **Naupactini**: *Mesagroicus poriventrtris* Reitter, 1903; **Otiorhynchini**: *Otiorhynchus simulans* Stierlin, 1877; **Polydrusini**: *Liophloeus tessulatus* (O. F. Müller, 1776), *Polydrusus viridicinctus* Gyllenhal, 1834; **Sitonini**: *Sitona waterhousei* Walton, 1846; **Hyperinae**: *Hypera arundinis* (Paykull, 1792), *H. rogenhoferi* (Ferrari, 1866); **Lixinae**: **Cleonini**: *Coniocleonus hollbergii* (Fåhraeus, 1842), *Pleurocleonus sollicitus* (Gyllenhal, 1834), *Pseudocleonus grammicus* (Panzer, 1789), *Rhabdorrhynchus echii* (Brahm, 1790), *Xanthochelus nomas* (Pallas, 1771); **Lixini**: *Larinus idoneus* Gyllenhal, 1835, *L. sibiricus* Gyllenhal, 1835; **Mesoptiliinae**: *Magdalis phlegmatica* (Herbst, 1797); **Molytinae**: **Cryptorhynchini**: *Cryptorhynchus lapathi* (Linnaeus, 1758); **Pissodini**: *Pissodes pini pini* (Linnaeus, 1758); **Orobitinae**: *Orobitis cyaneus* (Linnaeus, 1758). The following 15 species previously wrongly cited for either Rostov Oblast or the Republic of Kalmykia should be excluded from the faunal lists of both regions: *Aulacobaris picicornis* (Marsham, 1802), *Aulacobaris prasina* (Boheman, 1836), *Conorhynchus nigrivittis* (Pallas, 1781), *Elasmobaris signifera* (Faust, 1881), *Liocleonus clathratus* (Olivier, 1807), *Lixus albomarginatus* Bohemann, 1842, *Minyops minutus rudis* Ménétré, 1849, *Otiorhynchus (Nubidanus) juvenilus* Schoenherr, 1832, *Pholicodes (Pseudopholicodes) albidus* (Boheman, 1840), *Pholicodes inauratus arzanovi* Davidian, 1992, *Pseudocleonus marginicollis* (Fåhraeus, 1842), *Rhinocyllus conicus* (Frölich, 1792), *Entomoderus phrygius* (K. Daniel & J. Daniel, 1903), *Maximus aemulus* (Faust, 1894), *Xanthochelus nomas* (Pallas, 1771).

The following 15 species were erroneously included in the faunal lists of either Rostov Oblast or Kalmykia:

- Aulacobaris picicornis* (Marsham, 1802): Dobrovolsky (1951), Arzanov (1990); species presence is not confirmed;
Aulacobaris prasina (Boheman, 1836): Dobrovolsky (1951), (1990); species presence is not confirmed;

Conorhynchus nigrivittis (Pallas, 1781): Arzanov (1990); misidentification of *Conorhynchus kindermanni* Faust, 1904;
Elasmobaris signifera (Faust, 1881): Arzanov (1990); misidentification of *Elasmobaris annularis* (Faust, 1881);
Liocleonus clathratus (Olivier, 1807): Arzanov (1988); likely mislabelled specimen;
Lixus albomarginatus Bohemann, 1842: Kiseritzky (1912), Dobrovolsky (1951); misidentification of *Lixus ascanii* Linnaeus, 1767 (Dieckmann, 1980);
Minyops minutus rudis Ménériés, 1849: Arzanov (1990); misidentification of *Minyops carinatus* Linnaeus, 1767 (Osella, Bello, 2009);
Otiorhynchus (Nubidanus) juvenilus Schoenherr, 1832: Arzanov (1990); misidentification of *Otiorhynchus* sp. pr. *unctuosus* Germar, 1824;
Pholicodes (Pseudopholicodes) albidus (Boheman, 1840): Arzanov (1990); misidentification of *Pholicodes* sp. (Davidian, 1992);
Pholicodes inauratus arzanovi Davidian, 1992: Arzanov (1990); misidentification of *Pholicodes trivialis* Boheman, 1834 (Davidian, 1992);
Pseudocleonus marginicollis (Fåhraeus, 1842): Lukjanovitsh (1926), Arzanov (1988, 1990); species presence is not confirmed;
Rhinocyllus conicus (Frölich, 1792): Arzanov (1988); misidentification of *Rhinocyllus oblongus* Capiomont, 1873;
Entomoderus phrygius (K. Daniel & J. Daniel, 1903): Arzanov (1990); misidentification of *Rhytirrhinus gibbus* (Kolenati, 1858);
Maximus aemulus (Faust, 1894): Arzanov (1988); likely mislabelled specimen;
Xanthochelus nomas (Pallas, 1771): Arzanov (1990); misidentification of *Xanthoprochelus eversmanni* (Fåhraeus, 1842).

The known fauna of Curculionoidea (excluding Scolytinae) of both Rostov Oblast and Kalmykia (Table 1) consists of ten families and 700 species: Nemonychidae (1), Anthribidae (7), Rhynchitidae (12), Attelabidae (2), Apionidae (70), Nanophyidae (12), Brachyceridae (2), Dryophthoridae (4), Erihinae (13) and Curculionidae (577, excluding Scolytinae). Rostov Oblast has 620 recorded species, while 301 species were recorded in Kalmykia.

Table 1. Revised checklist of 700 species of Curculionoidea (excluding Scolytinae) of Rostov Oblast and Kalmykia. Species not cited for southern part of European Russia in the Catalogue of Palaearctic Coleoptera (Löbl & Smetana 2011, 2013) are marked with asterisk (*). Subregionals abbreviations are explained in Fig. 1.

Acknowledgements

I owe a depth of gratitude to my late teacher and tutor in entomology Margarita E. Ter-Minasian (St. Petersburg, Russia). Boris A. Korotyaev and Genrik E. Davidian (both St. Petersburg, Russia) critically checked identification of some specimens. Pavel P. Ivliev, Denis G. Kasatkin, Eduard A. Khachikov, Maxim V. Nabozhenko, and Igor V. Shokhin (all Rostov-on-Don, Russia) for over two decades collected and supplied weevil specimens. Vasily V. Grebennikov (Ottawa, Canada) critically read an early draft of this paper.
