Mesozoic is an interdisciplinary journal dedicated to the study of Earth and life evolution during the Mesozoic Era. Its scope within the geosciences is broad, encompassing disciplines such as stratigraphy, palaeontology, palaeogeography, palaeoclimate, palaeoenvironment, geochronology, sedimentology, geochemistry, palaeomagnetism, and tectonic geology. We encourage interdisciplinary collaboration to explore the deep relationships between biotic evolution and Earth's surface processes.

Mesozoic is funded by the Nanjing Institute of Geology and Palaeontology, Chinese Academy of Sciences (CAS), and is jointly presented by the Institute of Vertebrate Palaeontology and Paleoanthropology, CAS, Yunnan University, and Nanjing University. The journal publishes innovative research or review articles in English on a quarterly basis through Magnolia Press (Auckland, New Zealand). It operates as an open-access journal with no charges to authors. A brief description of the types of articles accepted is provided below.

Editorial. This section offers viewpoints on topics of specific interest and addresses current needs within the field. While most items in this section are invited by the editors, unsolicited contributions are also welcomed.

Article. Articles are expected to present significant advances in the field. They typically include an abstract, introduction, materials and methods, results or systematics,

and discussion. Supplementary materials can be included in the supplemental information, providing additional support for the paper's conclusions.

Review. Reviews should provide comprehensive syntheses of recent interdisciplinary developments and highlight future directions. They may include comprehensive revisions, catalogues, and lists, with a minimum of 15 published pages.

Correspondence. This section highlights recent research concisely (up to 4 published pages). Contributions may contextualize findings within the field or explain their interdisciplinary significance. Neither an abstract nor a list of keywords should be included. Supplementary materials can be included in the supplemental information.

News. This section offers in-depth analysis on major news within the field. Submissions may cover a diverse range of content, including announcements of upcoming meetings, comprehensive reports on concluded meetings, notifications regarding potential grants, as well as insightful book reviews.

Perspective. Perspectives encourage submissions such as responses to articles published in *Mesozoic* and other journals, as well as discussions.

Obituary. Obituaries for well-known scientists in Mesozoic-related fields will be published. Submissions should be recommended by at least one member of the Editorial Board.
