Abstract

Glaucocharis Meyrick is revised from China, with descriptions of nine new species: *G. brevis* sp. n., *G. flavifasciaria* sp. n., *G. paulispinata* sp. n., *G. grandispinata* sp. n., *G. siciformis* sp. n., *G. tridentata* sp. n., *G. biconvexa* sp. n., *G. scrotiformis* sp. n. and *G. setosa* sp. n.; *Glaucocharis incisella* (Bleszynski, 1970) and *G. pilcheri* Gaskin, 1988 are newly recorded for China; the females of seven species are described for the first time: *G. omeishani* (Bleszynski, 1965), *G. incisella* (Bleszynski, 1970), *G. parmulella* Wang & Sung, 1988, *G. pilcheri* Gaskin, 1988, *G. longqiensis* Song, 1993, *G. huanggangensis* Song & Chen, 2001 and *G. hastatella* Song & Chen, 2001. Images of the adults and illustrations of the genitalia for the new species are provided. The distribution data of the Chinese *Glaucocharis* are presented, along with a map showing the localities of these species.

Key words: Lepidoptera, Crambidae, Crambinae, *Glaucocharis*, new species, China
