Abstract

The species of the group *rubripes*, which harbors the type species of the genus *Corinna* C. L. Koch, 1842, are revised, including 20 Neotropical species. Three previously known species are re-diagnosed: *Corinna rubripes* C. L. Koch, 1842, *Corinna nitens* (Keyserling, 1891) and *Corinna mourai* Bonaldo, 2000. New records of *Corinna nitens* are provided, including the first ones from Peru and Bolivia. Seventeen new species, all from Brazil, were described: *C. aechmea* n. sp., *C. balacobaco* n. sp., *C. caatinga* n. sp., *C. demersa* n. sp., *C. escalvada* n. sp., *C. hyalina* n. sp., *C. jecatatu* n. sp., *C. kuryi* n. sp., *C. loiolai* n. sp., *C. maracas* n. sp., *C. regii* n. sp., *C. telecoteco* n. sp., *C. tranquilla* n. sp., *C. vesperata* n. sp., *C. vilanovae* n. sp., *C. zecarioca* n. sp. and *C. ziriguidum* n. sp. A key for all twenty species of the group is presented.

Key words: Neotropical Region, New species, Corinnidae, *Corinna*, taxonomy

To Regiane Saturnino for the help during a trip to Northern South American collections. Janael Ricetti, Felipe Amadeo, Nicholas Sebastian for the donation of material of *Corinna* to MPEG. We also thank Gustavo Piccoli and his advisor Gustavo Romero for providing relevant ecological information on *C. demersa*. The first author received a Master fellowship from CAPES and the second, a PQ fellowship (#304965/2012-0) from CNPq.
