Abstract

The checklist of the Arctiinae (generally treated as the Arctiidae previously) of the continental United States and Canada is revised, incorporating a number of corrections and changes to publication dates and nomenclature as presented in the recent checklist of Ferguson and Opler (2006). *Clemensia patella* (Druce) is revised to synonymy under *Clemensia albata* Packard, *Holoarctia sordida* (McDunnough) is raised from synonymy under *H. cervini* (Fallou), and *Arachnis apachea* Clarke is transferred from synonymy under *Arachnis verna* Barnes & McDunnough to *Arachnis citra* Neumögen & Dyar. *Palearctia* Ferguson is synonomized under *Holarctia* M. E. Smith. The North American taxa previously treated as the tribe Arctiini are segregated into the subtribes Arctiina and Spilosomina. The genera *Kodiosoma* Stretch and *Euerythra* Harvey, previously treated as Arctiini, are transferred to the subtribe Phaegopterina.

Key words: Checklist, tiger moths, United States, Canada

Introduction

The North American Arctiinae fauna was recently catalogued by Ferguson and Opler (2006), capturing many of the taxonomic changes in this group since the publication of the last comprehensive list (Franclemont 1983) nearly 25 years ago (Franclemont 1983; note that this paper follows the revised family-group nomenclature within Noctuoidea proposed by Lafontaine and Fibiger [2006], with the Arctiidae recognized as a subfamily of the Noctuidae, and previously delineated subfamilies equal to tribes, and tribes as subtribes). Due to uncertainty of publication dates in early taxonomic works, a number of errors in publication dates appeared in the Ferguson and Opler (2006) checklist, and the primary purpose of the present list is to rectify these errors before they become incorporated into subsequent publications. The numerous discrepancies in publication dates between Ferguson and Opler (2006) and the present checklist are not noted individually. Publication date discrepancies between Franclemont (1983) and those given herein are however noted. Palaearctic synonyms of species currently treated as having a Holarctic distribution are not included here, and the original orthography of species epithets are used. For a discussion of this matter, see Sommerer (2002). The occurrence in the U. S. of three species, *Virbia cetes* (Druce, 1897), *V. marginata* (Druce, 1885) and *Pseudohemihyalea mansueta* (Henry Edwards) remains unsubstantiated (Ferguson & Opler 2006), and they are therefore not included in this list.

The publication dates for the works of R. H. Stretch, F. Walker, J. Hübner and F. E. Guérin-Méneville require clarification. The nine-part series of “Illustrations of the Zygaenidae and Bombycidae of North America” published by R. H. Stretch were published between July 1872 and December 1873 according to the title,

with the accepted dates of publication as 1872 for the first part (pages 1–184) and 1874 for the latter part (pages 185–242). The arctiine names proposed by Stretch in the latter part of his work should therefore be cited as [1874]. The 1864 volume of the “List of the Lepidopterous Insects in the Collection of the British Museum” by F. Walker was actually published the following year (Watson *et al.* 1980). The correct date for these names is therefore [1865]. Hemming (1937) restricted the publication dates for the works of Hübner, with a date range given for ambiguous dates. According to the rules of the International Code of Zoological Nomenclature (Article 21. 6), the latest date should be adopted as the accepted date of publication in the case of date ranges (International Commission on Zoological Nomenclature 1999). The taxa named by Guérin-Méneville in “Iconographie du règne animal de G. Cuvier” (Guérin-Méneville 1844) have variously been attributed to dates between 1831 to 1844, but as both Cowan (1971) and Sherborn (1922) conclude, this work was most likely published as one block in 1844. Accordingly, taxa named therein should be attributed to Guérin-Méneville 1844.

With the exception of the subtribe Arctiina (*Arctiini sensu* Franclemont 1983 and Ferguson & Opler 2006), the tribal and subtribal arrangement presented herein generally follows that of Watson and Goodger (1986), Kitching and Rawlins (1998), Bendib and Minet (2000), and Jacobson and Weller (2002), with the nomenclature adjusted to reflect the changes proposed by Lafontaine and Fibiger (2006). The Arctiina is segregated into the *Arctiina sensu stricto* and Spilosomina, with *Kodiosoma* Stretch and *Euerythra* Harvey transferred to the Phaegopterina, based on the results of Schmidt (2007). *Sonorarctia* Ferguson, previously associated with the *Phragmatobia* group of genera (Ferguson 1985), is more closely related to *Apantesis* Walker and is therefore placed in the Arctiina (Schmidt 2007).

The classification of the Callimorphina has recently been revised by DaCosta and Weller (2005), which we follow here. The “*Euchaetes* clade” (Jacobson & Weller 2002), included in the Callimorphini by Ferguson and Opler (2006), is placed in the Phaegopterina here, following DaCosta and Weller (2005). Although Ferguson and Opler (2006) included 10 genera under the *Euchaetes* clade, only *Euchaetes*, *Cycnia* and *Ectypia* were included by Jacobson and Weller (2002), and DaCosta *et al.* (2006) subsequently showed that *Pygarctia* and *Pygoctenucha* are also part of this group, but that *Pareuchaetes* is not. *Kodiosoma*, previously placed in the Arctiina, is also allied to *Cycnia* (Schmidt 2007), and we therefore place all *Euchaetes* group genera together at the end of the Phaegopterina. Until affinities of the remaining phaegopterine genera are better understood, we maintain the sequence of genera as previously established (Franclemont 1983), with newly transferred genera placed prior to the *Euchaetes* group.

In summary, the following recent changes in our understanding of arctiine phylogeny have resulted in the following taxonomic changes:

- Arctiidae re-classified as subfamily of Noctuidae (Lafontaine & Fibiger 2006), with subfamilies and tribes relegated to tribes and subtribes, respectively.
- The Arctiinae (*sensu* Lafontaine & Fibiger 2006) consist of three tribes i.e., Syntomini, Lithosiini and Arctiini, corresponding to the subfamilies recognized by Kitching and Rawlins (1998) and Jacobson and Weller (2002).
- Syntomini are not related to the Ctenuchina and Euchromiina (Kitching & Rawlins 1998), and are not known to occur in the New World. Ctenuchina and Euchromiina are treated as subtribes of the Arctiini (Kitching & Rawlins 1998; Jacobson & Weller 2002).
- The following taxa have previously been removed from the Lithosiini:
 - o *Afrida* Möschler, consisting of *Afrida* Möschler, is tentatively included in the Noctuidae: Nolinae (Lafontaine & Fibiger 2006), following Kitching and Rawlins (1998). “*Afrida*” *exegens* Dyar is not congeneric with *Afrida* (*sensu stricto*), and is currently unplaced within the Arctiini (Ferguson & Opler 2006).
 - o *Comachara* Franclemont has been transferred to Noctuidae: Acronictinae (Wagner *et al.* 2006).

- *Pagara* Walker – the two North American species listed by Franclemont (1983) were arranged by Ferguson and Opler (2006) as follows: *Pagara simplex* Walker (Callimorphini: *Euchaetes* clade) and *Trocodima fuscipes* Grote (Phaegopterini). Both species are here included in the Phaegopterina, as discussed above with respect to the *Euchaetes* clade.
- *Neoplynes* Hampson transferred to Phaegopterina (Ferguson & Opler 2006)
- The *Euchaetes* group of genera, consisting of *Euchaetes*, *Cycnia*, *Pygarctia*, *Pygoctenucha*, and *Ectypia* (DaCosta *et al.* 2006) included in the Callimorphina by Ferguson and Opler (2006) are here placed in the Phaegopterina (DaCosta & Weller 2005).
- The tribe Doaini (Arctiidae: Pericopinae, *sensu* Franclemont 1983) was raised to family status by (Donahue & Brown 1987).

APHISAON Boisduval, 1870

1. Reported from Florida by Habeck (2007).

2. The name *immacula* (Boisduval, 1870) was apparently included in error by Ferguson and Opler (2006).

3. Erroneously listed as a synonym of *Gnophaela vermiculata* (Grote) in Watson and Goodger (1986).

4. Omitted in Ferguson and Opler (2006), who instead list *immacula* French, 1884 as a synonym. The latter name was never published, and was erroneously included.

5. The type species of *Hyelosia* Hubner, 1818 was subsequently designated as *Phalaena aglaura* Cramer, [1780] by Fletcher (1979), a junior subjective synonym of *Dysschema tricolor* (Sulzer, 1776) according to Watson and Goodger (1986), who also established usage priority of *Dysschema* over *Hyelosia*. *Hyelosia aglaura* (Cramer) is erroneously included in the Geometridae by Fletcher (1979) and Parsons et al. (1999).

-

1. The Phaegopterina are likely not a natural group, and much more work will be needed to determine relationships. Two relatively well-defined groups that have been placed in the Phaegopterina are the *Halysidota* group (Jacobson & Weller 2002) and the *Euchaetes* group (DaCosta *et al.* 2006). The *Halysidota* group is not segregated here, since the constituent genera were not defined by Jacobson and Weller (2006). The *Euchaetes* group genera are herein placed together at the end of the subtribe. The sequential order of the remaining phaegopterines follows that of Franclemont (1983), with newly included, but unplaced genera appended.

2. The correct date of publication is 1875, not 1874 as given in Franclemont (1983).

ECTYPIA Clemens, 1861

EUVERNA Neumögen & Dyar, 1893

234. *bivittata* Clemens, 1861

nigroflava (Graef, 1887)

2. Previously placed in the Lithosiini (Franclemont 1983), as suggested by Forbes (1960). DaCosta *et al.* (2006) state that *N. eudora* did not share characters with the *Euchaetes* group of genera included in their study, and concurred that it was a lithosiine. However, the male genitalia show clear affinities to the Phaegopterina (setal tuft at base of uncus, dorsal processes of uncus, tripartite valve), and we therefore retain this taxon in the Phaegopterina.

1. *P. terminalis* is likely congeneric with *Euchaetes* (DaCosta *et al.* 2006). Both genera are in need of revision.
