

Lourenço, A.C.C., Baêta, D., Abreu, A.C.L. & Pombal Jr., J.P. (2010) Tadpole and advertisement call of *Rhinella pombali* (Baldiñera, Caramaschi & Haddad, 2004) (Amphibia, Anura, Bufonidae). *Zootaxa*, 2370, 65–68.

In the call description of *Rhinella pombali* (page 67, third paragraph), unfortunately there was a typographical error regarding the duration of the call. In the paper is writing:

“The advertisement call of *R. pombali* (Figure 3) consists of a series of multipulsed notes (mean and standard deviation are show in parentheses). **The duration of notes ranges** from 3.43 to 4.93 seconds (4.28 ± 0.65 , $n=7$), and call interval between 7.79–15.29 seconds (12.82 ± 2.94 , $n=6$). The number of notes ranges from 51 to 76 (66 ± 9.92 , $n=7$), with duration between 0.025–0.039 seconds (0.031 ± 0.003 , $n=35$), and interval between 0.026–0.041 seconds (0.034 ± 0.004 , $n=28$).”

The term "**duration of call**" was incorrectly replaced in the third line by "**duration of notes**". The correct sentence is:

“The advertisement call of *R. pombali* (Figure 3) consists of a series of multipulsed notes (mean and standard deviation are show in parentheses). **The duration of call ranges** from 3.43 to 4.93 seconds (4.28 ± 0.65 , $n=7$), and call interval...”.
