- BY** David Evans Walter, Samuel Bolton, Matti Uusitalo & Zhi-Qiang Zhang (for full author addresses, see **Contributor roles and addresses** after **References**). The title of this contribution should be cited as “Suborder Endeostigmata Reuter, 1909. *In: Zhang, Z.-Q. (Ed.) Animal biodiversity: An outline of higher-level classification and survey of taxonomic richness*”.
- Higher classification and estimates of genera and species within families generally follow Lindquist et al. (2009), with updates as otherwise indicated. To be consistent with Beaulieu *et al.* (2011), Schatz *et al.* (2011) and Zhang et al. (2011), the rank cohort is not used and older names for higher taxa are used.
- Senior synonym of Alycina (Lindquist, Krantz & Walter, 2009).
- Uusitalo (2010) revised this family with several new genera.
- Throughout this paper, counts of genera and species are totals (Recent and fossil); †x/y refers x genera and y species, among the totals, are based on fossil.
- Proposed originally by Lindquist, Krantz & Walter, 2009 at the rank of cohort.
- Terpnacarina of Lindquist, Krantz & Walter (2009).
- Based on Momen et al. (2004) with updates.
- Alicorhagiina of Lindquist, Krantz & Walter (2009).
