ANDRÉ NEMÉSIO, JOSÉ E. SANTOS JÚNIOR & FABRÍCIO R. SANTOS (2012) *Eufriesea zhangii* sp. n. (Hymenoptera: Apidae: Euglossina), a new orchid bee from Brazil revealed by molecular and morphological characters. *Zootaxa*, 3609(6), 568–582.

Acknowledgments to read as:

The Brazilian government, through the environmental departments IBAMA and ICMBio, provided the collecting permits (#26425-1 and 4310-1). We thank Prof. Dr. Adalberto J. Santos, from the 'Universidade Federal de Minas Gerais', for allowing us to photograph the holotype depicted in Figures 4-6 using the equipment under his care (provided by the project INCT/HYMPAR/SUDESTE). CNPq (National Research Council of Brazil), and FAPEMIG (Fundação de Amparo à Pesquisa do estado de Minas Gerais) partly funded this research through grants to FRS. Two anonymous reviewers and Claus Rasmussen, Zootaxa editor for Apoidea, made valuable comments and suggestions that greatly improved this manuscript.
