Abstract

An updated classification of the order Hymenoptera is provided with the current numbers of genera and species described so far specified. The order is composed of 2 suborders, 27 superfamilies, 132 families, 8423 extant genera with an additional 685 extinct genera. Considered one of the most species-rich insects orders a total of 153088 extant species have been described, in addition to 2429 extinct species.

Key words: Hymenoptera, wasps, bees, ants, classification, diversity

Introduction

The present list concerns the current classification and described diversity of the order Hymenoptera which includes all wasps, bees and ants. Classification of extant superfamilies follows Sharkey (2007) and Sharkey *et al.* (2011). The number of described and here included genus-group and species-group taxa are, unless otherwise stated, updated until April 2012, while family-group taxa are updated until August 2013. In the counts for fossil genera and species, only extinct taxa are included, not fossil representatives of extant taxa.

The taxa of Hymenoptera are divided into two suborders (Symphyta and Apocrita), with 27 superfamilies (9 superfamilies in Symphyta and 18 in Apocrita) and 132 families. It is noteworthy that 17 of these families have been described since year 2000 and that 16 of these newly recognized families represent now extinct families only known from fossils. New genera and species are frequently encountered and our most recent estimate total 8423 extant genera with an additional 685 extinct genera. Considered one of the most species-rich insect orders, behind only Coleoptera and Lepidoptera, there is a total of 153088 extant and described species, in addition to 2429 extinct described species.

Diversity estimates based on described species for some of the parasitic wasp families can be misleading. There is a rich literature on the family Cynipidae with much ongoing research, but the classification is currently changing and many new species are being described especially from the northern Neotropical and Oriental regions. At the same time several groups remain without modern revisions, and there is a wealth of synonyms particularly due to separate names of morphologically different generations in the subfamily Cynipinae. Diversity counts for Figitidae and several other large families of parasitic Hymenoptera also bear little relationship to the actual diversity. All major groups of Figitidae (most of the subfamily Eucoilinae, the major genera in Charipinae, plus some genera of Figitinae, Anacharitinae and Aspicerinae) remain without modern revisions, and there are very few current workers in the group. To exemplify this, of the 919 currently formally valid species names in Eucoilinae, current researchers have examined less than 50% of the types and assessed the generic combination—at most 400 species are confirmedly valid and actually recognizable. Even in Europe, the historically best known area, at least 50% of the species present in collections are in fact still undescribed, and for the rest of the world, this ratio is much higher (Forshage, pers. obs.). For real numbers of species of Figitidae, the only figure someone has dared to estimate is an approximately 14,000 (Nordlander, 1984).

Classification

Order **Hymenoptera** Linnaeus, 1758 (2 suborders) (8,423 (and †684) genera, 152,677 (and †2,428) species)

Suborder **Symphyta**¹ (9 superfamilies, 25 families)

Superfamily **Anaxyeloidea** Martynov, 1925 (1 family)

Family **Anaxyelidae** Martynov, 1925 (1 (and †12) genera, 1 (and †32) species)

Superfamily **Cephidoidea** Newman, 1834 (2 families)

Family **Cephidae** Newman, 1834 (21 (and †3) genera, 160 (and †6) species)

† Family **Sepulcidae** Rasnitsyn, 1968 (†15 genera, †38 species)

† Superfamily **Karatavitoidea** Rasnitsyn, 1963 (1 family)

† Family **Karatavitidae** Rasnitsyn, 1963 (†5 genera, †6 species)

Superfamily **Orussoidea** Newman, 1834 (2 families)

Family **Orussidae** Newman, 1834 (16 (and †2) genera, 82 (and †3) species)

† Family **Paroryssidae** Martynov, 1925 (†4 genera, †10 species)

Superfamily **Pamphilioidea** Cameron, 1890 (3 families)

Family **Megalodontesidae** Konow, 1897 (1 (and †1) genera, 42 (and †1) species)

1. Taeger *et al.* 2010; Taeger & Blank 2012.

- Family **Pamphiliidae** Cameron, 1890 (10 (and †3) genera, 291 (and †5) species)
 † Family **Xyelydidae** Rasnitsyn, 1986 (†8 genera, †20 species)
- Superfamily **Siricoidea** Billberg, 1820 (6 families)
 † Family **Daohugoidae** Rasnitsyn & Zhang, 2004 (†1 genus, †1 species)
 † Family **Praesircidae** Rasnitsyn, 1968 (†6 genera, †8 species)
 † Family **Protosircidae** Rasnitsyn & Zhang, 2004 (†1 genus, †1 species)
 † Family **Pseudosircidae** Handlirsch, 1908 (†1 genus, †14 species)
 † Family **Sinosircidae** Hong, 1975 (†1 genus, †1 species)
- Family **Siricidae** Billberg, 1820 (11 (and †9) genera, 111 (and †13) species)
- Superfamily **Tenthredinoidea** Latreille, 1803 (8 families)
 Family **Argidae** Konow, 1890 (58 (and †1) genera, 897 (and †7) species)
 Family **Blasticotomidae** Thomson, 1871 (2 (and †1) genera, 12 (and †1) species)
 Family **Cimbicidae** W. Kirby, 1837 (16 (and †6) genera, 182 (and †19) species)
 Family **Diprionidae** Rohwer, 1910 (11 (and †2) genera, 136 (and †2) species)
 † Family **Electrotomidae** Rasnitsyn, 1977 (†1 genus, †1 species)
 Family **Pergidae** Rohwer, 1911 (60 genera, 442 species)
 Family **Tenthredinidae** Latreille, 1803 (400 (and †14) genera, 5500 (and †79) species)
 † Family **Xyelotomidae** Rasnitsyn, 1968 (†14 genera, †21 species)
- Superfamily **Xiphydrioidea** Leach, 1819 (1 family)
 Family **Xiphydriidae** Leach, 1819 (28 genera, 146 species)
- Superfamily **Xyeloidea** Newman, 1834 (1 families)
 Family **Xyelidae** Newman, 1834 (5 (and †47) genera, 63 (and †93) species)
- Suborder **Apocrita** (18 superfamilies, 105 families)
 † Superfamily **Ephialtitoidea**² Handlirsch, 1906 (1 family)
 † Family **Ephialtitidae** Handlirsch, 1906 (†2 genera, †60 species)
- Superfamily **Trigonaloidea**³ Cresson, 1887 (2 families)
 † Family **Maimetshidae**⁴ Rasnitsyn, 1975 (†9 genera, †11 species)
 Family **Trigonidae**⁵ Cresson, 1887 (16 (and †4) genera, 92 (and †5) species)
- Superfamily **Megalyroidea** Schletterer, 1889 (1 family)
 Family **Megalyridae**⁶ Schletterer, 1889 (8 (and †11) genera, 43 (and †40) species)
- Superfamily **Stephanoidea** Leach, 1815 (1 family)
 Family **Stephanidae**⁷ Leach, 1815 (11 (and †4) genera, 342 (and †8) species)
- Superfamily **Ceraphronoidea** Haliday, 1833 (4 families)
 Family **Ceraphronidae**⁸ Haliday, 1833 (15 genera, 304 (and †2) species)
 Family **Megaspilidae**⁹ Ashmead, 1893 (12 (and †1) genera, 299 (and †12) species)

 3. This name has been spelled in two ways: Trigonalidae and Trigonalyidae. The family was proposed as Trigonalidae by Cresson (1887) and is based on the genus *Trigonalyis* Westwood (1835). Westwood did not provide the derivation of his genus-group name, but it must be assumed that *Trigonalyis* is to be treated as a noun in the nominative singular. It is presumably a compound word. If Latin, the first part of the name “trigonum” is a noun meaning triangle but the second part is ambiguous; it might come from the Greek “alys” or it might be an arbitrary combination of letters. Only in the latter case does ICZN Article 29.3.3 apply and the stem adopted by Cresson, who establishes the new family-group taxon, must be accepted as the correct spelling, namely Trigonalidae.

Superfamily **Apoidea** Latreille, 1802 (13 families)

- Family **Ampulicidae**⁶⁸ Shuckard, 1840 (6 (and †7) genera, 200 (and †8) species)
 - Family **Andrenidae**⁶⁹ Latreille, 1802 (77 (and †3) genera, 2917 (and †11) species)
 - † Family **Angarosphecidae**⁷⁰ Rasnitsyn, 1975 (†13 genera, †44 species)
 - Family **Apidae**⁷¹ Latreille, 1802 (209 (and †22) genera, 5749 (and †87) species)
 - Family **Colletidae**⁷² Lepeletier de Saint Fargeau, 1841 (86 genera, 2547 (and †2) species)
 - Family **Crabronidae**⁷³ Latreille, 1802 (242 (and †24) genera, 8773⁷⁴ (and †29) species)
 - Family **Halictidae**⁷⁵ Thomson, 1869 (79 (and †7) genera, 4327 (and †22) species)
 - Family **Megachilidae**⁷⁶ Latreille, 1802 (76 (and †6) genera, 4096 (and †34) species)
 - Family **Melittidae**⁷⁷ Schenck, 1860 (15 (and †2) genera, 187 (and †4) species)
 - † Family **Mellitosphecidae**⁷⁸ Poinar & Danforth, 2006 (†1 genus, †1 species)
 - † Family **Paleomelittidae**⁷⁹ Engel, 2001 (†1 genus, †1 species)
 - Family **Sphecidae**⁸⁰ Latreille, 1802 (19 (and †1) genera, 724⁸¹ (and †1) species)
 - Family **Stenotritidae**⁸² Cockerell, 1934 (2 genera, 21 species)
- Apocrita incertae sedis (3 families)
- † Family **Archaeocynipidae**⁸³ Rasnitsyn & Kovalev, 1988 (†2 genera, †3 species)
 - † Family **Eostephanitidae** Hong, 2002 (†1 genus, †1 species)
 - † Family **Kuafuidae**⁸⁴ Rasnitsyn & Zhang, 2010 (†3 genera, †3 species)

Acknowledgements

Gerardo Lamas and Josef Straka are thanked for information about the spelling of Trigonalidae. Support to C. Rasmussen was provided by a Carlsberg Foundation grant, support to A.P. Aguiar was provided by research funding from FAPES – Fundação de Amparo à Pesquisa do Espírito Santo (Process 45.440.611/2009), support to A.S. Lelej was provided by Far Eastern Branch of the Russian Academy of Sciences (# 12-I-II-30-03), support to N.F. Johnson was supported in part by the National Science Foundation under grant No. DEB-0614764 to N.F. Johnson and A.D. Austin and the Evanoidea contribution was funded, in part, by the U.S. National Science Foundation (award DEB-0842289).

-
- 63. Osten (2005) ignored Argaman's classification and lists only 43 valid genera for Scoliidae. While Argaman's division of the family into 143 genera is not supported by phylogenetic analysis or proper diagnosis, the family obviously is very diverse and in need of a generic revision based on a phylogeny.
