<http://zoobank.org/urn:lsid:zoobank.org:pub:68918F5C-27E5-4064-8EBB-55D65677A806>

**A. ANKER (2011) Two new species of *Salmoneus* Holthuis, 1955 with a deep dorsal depression on the carapace (Crustacea, Decapoda, Alpheidae). *Zootaxa*, 3041, 39–50.**

In the legend of Figure 5 (page 46), an accidental omission of “E” and “left second pereopod” resulted in “F” and “G” not corresponding to the individual figures of the distal minor cheliped and second pereopod in Figure 5. The correct legend for this figure is as following:

**FIGURE 5.** *Salmoneus depressus* sp. nov. A–I, paratype, ovigerous specimen (cl 4.8 mm) from Bocas del Toro, Caribbean coast of Panama, MNHN-IU-2011-5175; A, major cheliped, mesial; B, same, lateral; C, major chela, lateral; D, minor cheliped, lateral; E, same, carpus and minor chela, mesial; F, right second pereopod, lateral; G, left second pereopod, lateral; H, third pereopod, lateral; I, fifth pereopod, lateral. Scale bars as indicated.

The author is grateful to Paulo P.G. Pachelle (LIMCE, Universidade Federal do Ceará, Fortaleza, Brazil) for pointing out this error.
