In examining the history of generic names given to species in the polytypic genus *Myrmeciza* (Isler et al. 2013), we did not uncover the genus *Akletos*. This name had been applied by Dunajewski (1948) to a new species, *Akletos peruvianus*, represented by a single specimen collected by Fiedler on 16 March 1934 at what is now Cumaria, Ucayali, Peru, and deposited in the Museum and Institute of Zoology of the Polish Academy of Sciences (MIZ 34107). The species was said to be similar to *Attila* Lesson, which at the time was placed in the family Cotingidae. The holotype was later identified as *Myrmeciza melanoceps* by Stresemann (Mayr 1956) as reported by Mlíkovský (2009) who also confirmed the identification. To provide further confirmation and documentation, Dominika Mierzwa of the Museum and Institute of Zoology of the Polish Academy of Sciences provided digital photographs of the type, clearly a female, an example of which is included herein.

Thus, the generic name *Inundicola* Bravo, Isler, and Brumfield 2013 is a junior synonym of *Akletos* Dunajewski 1948. The generic descriptions provided in Isler et al. 2013 are amended as follows.

***Akletos* Dunajewski 1948**

Type species. *Akletos peruvianus* Dunajewski = *Thamnophilus melanoceps* Spix, 1825.

Included species. *Akletos melanoceps* (Spix) WHITE-SHOULDERED ANTIBIRD.

Akletos goeldii (Snethlage) GOELDI'S ANTIBIRD.

Acknowledgments

We are indebted to J. A. Jobling, who noted the existence of the earlier publication soon after publication of the *Myrmeciza* paper, and to D. Mierzwa for photographing the specimen. Two anonymous reviewers provided helpful suggestions for improving the manuscript.
