The braconid genus *Napo* was established by Shaw (2012) for a single species *Napo townsendi* Shaw, 2012 from Napo Province, Ecuador. However, the genus name *Napo* is preoccupied and was initially introduced by Linnavuori & DeLong (1976) for a deltocephalinae leafhopper genus with *Napo brazosellus* Linnavuori & DeLong, 1976 as the type species (Hemiptera: Cicadellidae). Thus, the genus *Napo* Shaw, 2012 is a junior homonym of the genus *Napo* Linnavuori & DeLong, 1976. According to Article 60 of the ICZN (2015), we propose the new replacement name *Yanayacu* **nom. nov.** for *Napo* Shaw, 2012. The resulting nomenclatural changes are summarized below.

Genus *Yanayacu* **nom. nov.**

Napo Shaw, 2012: 102 (Hymenoptera: Braconidae: Euphorinae). Preoccupied by *Napo* Linnavuori & DeLong, 1976: 34 (Hemiptera: Cicadellidae: Deltocephalinae).

Type species: *Napo townsendi* Shaw, 2012

Etymology. The genus is named for the type locality, Yanayacu Biological Station, Napo Province, Ecuador ; gender masculine.

Yanayacu townsendi (Shaw, 2012) **comb. nov.**

Napo townsendi Shaw, 2012: 103.

Distribution. Ecuador (Napo Province).

Acknowledgments

We thank Scott R. Shaw, University of Wyoming, and John T. Jennings, University of Adelaide, for valuable comments on the manuscript. This work was supported by the Guizhou Province Natural Science Foundation ([2014]2014, [2013]2307).
