**MAURICIO RIVERA-CORREA, CARLOS JIMÉNEZ-RIVILLAS & JUAN M. DAZA (2017)
 Phylogenetic analysis of the Neotropical *Pristimantis leptolophus* species group (Anura: Craugastoridae):
 molecular approach and description of a new polymorphic species. *Zootaxa*, 4242: 313–343.**

We provide the Table 3 that was missing from the proofs. The table refers to species comparisons among species within the *Pristimantis leptolophus* species group.

TABLE 3. Comparison of diagnostic characters in species of the *Pristimantis leptolophus* group. Sources: (1) Lynch (1980); (2) Lynch (1991); (3) Lynch (1995); (4) Lynch and Rueda-Almonacid (1998); (5) González-Durán (2015); (6) this study.

Species	Fringes on fingers	Tympanic annulus	Nuptial pads	Vomerine teeth	Upper eyelid tubercles	Dorsolateral I folds	Heel tubercle	Color patterns	Source
<i>P. lasalleorum</i>	Fringes	Present	Present	Absent	Present	Present	Present	Dorsum dark brown with paler dorsolateral folds and scattered black spots; concealed limbs brown with cream spots.	3,6
<i>P. leopardus</i> sp. nov.	Absent	Present	Absent	Present	Absent	Absent	Absent	Dorsum golden to copper with dark brown spots, marks and blotches; concealed surfaces of limbs golden-copper without marks.	6
<i>P. leptolophus</i>	Fringes	Present	Absent	Absent	Present	Present	Present	Dorsum brown with darker markings; concealed limbs brown with cream blotches.	1
<i>P. maculosus</i>	Koels	Present	Present	Present	Present	Absent	Present	Dorsum dark brown; flanks and concealed limb surfaces black with large pale spots.	2
<i>P. paracattus</i>	Absent	Present	Absent	Present	Present	Present	Present	Dorsum brown with darker markings; concealed limbs dark brown without marks.	4,6
<i>P. peraticus</i>	Fringes	Absent	Absent	Present	Present	Present	Present	Dorsum brown with no markings or ill-defined markings; anterior and posterior surfaces of thighs cream with brown spots.	1
<i>P. scoloblepharus</i>	Fringes	Present	Present	Present	Present	Present	Present	Dorsum brown with darker brown mottling, flanks paler; posterior surfaces of thighs brown, with or without pale spots.	2,6
<i>P. stictus</i>	Absent	Present	Absent	Absent	Present	Present	Present	Dorsum golden to copper or brown with dark brown spots and marks blotches in surfaces of the concealed thighs.	5
<i>P. uranobates</i>	Fringes	Present	Present	Present	Present	Present	Present	Dorsum gray to brown with brown markings; posterior surfaces of thigh brown with cream flecks.	2,6
