HERON HUERTA & SCOTT J. FITZGERALD (2020) A new species of *Setostylus* Matile and new records of *Setostylus bellulus* (Williston) (Diptera: Keroplatidae). *Zootaxa*, 4722: 084–090.

Under Key (option 4) to be replaced:

Wrong Key option 4.

- 4 Posterior edge of male tergite 9 with v-shaped emargination (Figs. 3C, E); wing light brown fumose along costal edge near anterior apical portion of wing to distinctly marked with brown more broadly (Fig. 2) **xoxo spec. nov.** (Mexico (Morelos), USA (Arizona))
- Posterior edge of male tergite 9 with v-shaped emargination (Figs. 3C, E); pale ventral strip medially between gonocoxites long (at least extents 3/4 of total length of the gonocoxites) (Figs. 3B, D); wing light brown fumose along costal edge near anterior apical portion of wing to distinctly marked with brown more broadly (Fig. 2) **xoxo spec. nov.** (Mexico (Morelos), USA (Arizona))

Corrected Key option 4.

- 4 Posterior edge of male tergite 9 broadly rounded (Matile 1990, Fig. 932); wing hyaline to light brown fumose along costal edge near apex. **bellulus (Williston, 1900)** (Brazil, Central America, Mexico (Tabasco))
- Posterior edge of male tergite 9 with v-shaped emargination (Figs. 3C, E); wing light brown fumose along costal edge near anterior apical portion of wing to distinctly marked with brown more broadly (Fig. 2) **xoxo spec. nov.** (Mexico (Morelos), USA (Arizona))
