

**CHRISTOPHER CRUZ-GÓMEZ (2021) A new genus and seven new species of chrysopetalids (Annelida, Chrysopetalidae) from the Tropical Eastern Pacific. *Zootaxa*, 5068: 001–059.**

In the material and methods section (page 4), the name of the species for which a neotype is proposed should be read *Paleanotus purpurea* instead of *Bhawatsonia purpurea* **n. comb.** The neotype proposal is related to the species-group name *P. purpurea* Rioja, 1947, basionym of *B. purpurea* **n. comb.**, whose type material is lost (ICZN 1999, Art. 72.1.2). In page 33, the synonymy section of *Bhawatsonia purpurea* **n. comb.** omitted the basionym of the species (*P. purpurea*) and subsequent references. In the section of *Bhawatsonia purpurea* (Rioja, 1947) **n. comb.** (page 33) the synonymy section is missing. This should be as follows:

*Paleanotus purpurea* Rioja, 1947: 517–519, Figs 1–7.—Cruz-Gómez & Bastida-Zavala 2018: 82–83, Figs 12A–I, 13, 14L, 15I.—Cruz-Gómez *et al.* 2021: 180, Fig. 4T (key of chrysopetalids from Tropical America).
