

SERGEY A. BELOKOBYSKIY & ANDRANIK R. MANUKYAN (2024)

***Properhyssalus*, a new fossil genus of braconid wasps close to the genus *Rhyssalus* Haliday (Hymenoptera: Braconidae: Rhyssalinae) from Baltic amber. *Zootaxa*, 5415 (4): 552–560.**

In this article a new species of the new genus *Properhyssalus* was named in honour of Professor Wojciech Czechowski (see Etymology on the page 556) and should be written as *P. czechowskii*.

Unfortunately, due to an accidental typographical error, the name appeared as *P. szechowskii*, which was copied into pages 552 (Abstract), 553 (type species of the new genus), 554 and 555 (figure legends for plates 1 and 2), and 556 (heading in the description of this species).

The species name is a typographical error and we herein correct the spelling of the species name which should in all cases appear as *P. czechowskii* Belokobylski, 2024.
