DANIEL OCHOA-VÁZQUEZ, JESÚS A. CRUZ-LÓPEZ, ROGELIO ROSAS-VALDEZ & ELIZABETH A. MARTÍNEZ-SALAZAR (2026) From the monotypic to the diverse: three new species of *Diguetinus* Roewer, 1912 (Opiliones, Eupnoi, Globipedidae) from Mexico. *Zootaxa*, 5799 (3): 521–547.

In the above published paper, Figure 17 was inadvertently duplicated and is identical to Figure 15. While Figure 15 is correct as published, Figure 17 should have displayed the SEM images corresponding to the species *Diguetinus susticacan* sp. nov. The correct version of Figure 17 is provided below:

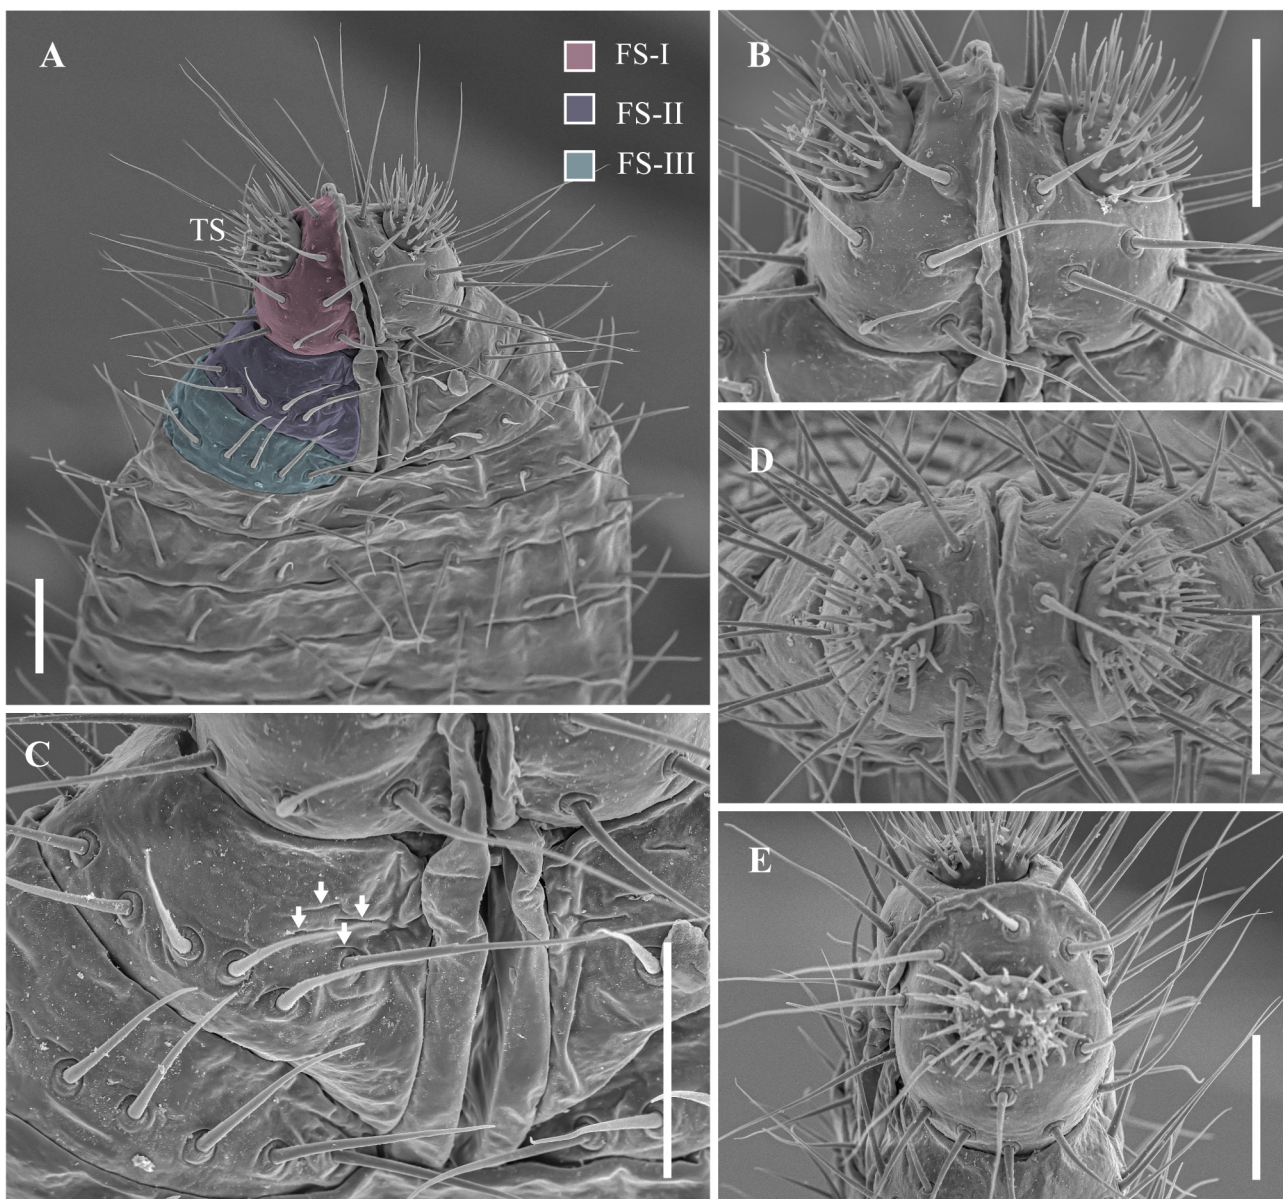

FIGURE 17. Ovipositor SEM images of *Diguetinus susticacan* sp. nov. holotype (CNAN-T01901). A. Three segmented furca FS-I to FS-III (FS: furca segments), left side colored. TS: terminal sensorium. B. FS-I enlargement. C. FS-II detailed. D. Apical view. E. Lateral view of FS-I. Scale bars: 100 μ m.
